

AFREEN NAEEM

Aspiring Software Application Developer | Graduating 2026

Bhopal, India | [+91 8982009264](tel:+918982009264) | afreen45609831@gmail.com | github.com/AfreenNaeem | linkedin.com/in/afreennaeem

PROFESSIONAL SUMMARY

Computer Science graduate (B.Tech, AI & ML specialization, 2026) with strong hands-on experience in Python software development — REST API design, backend architecture, and database integration using Django and Django REST Framework — plus working knowledge of Java and OOP. Currently a Software Developer on a live, production Hospital Management System, also involved in functional, regression, and API testing on a second mobile application project. Solid foundation in DSA, DBMS, and testing practices, with a demonstrated ability to learn new languages and frameworks quickly. Microsoft Azure Fundamentals (AZ-900) and Generative AI certified. Seeking to grow as a software developer through Google's Software Application Development Apprenticeship.

TECHNICAL SKILLS

- Programming Languages: Python (primary — hands-on project & professional experience), Java (foundational/working knowledge)
- Frameworks & Libraries: Django, Django REST Framework (DRF), Spring Boot (basic)
- Databases: MySQL, Relational Database Management (RDBMS)
- Core CS Fundamentals: Data Structures & Algorithms (DSA), Object-Oriented Programming (OOP), DBMS, REST API Design
- Software Practices: Unit, functional & regression testing, API testing (Postman), load testing (JMeter), debugging, Git
- Tools: VS Code, Git/GitHub, Postman, Apache JMeter, Maven, Google Workspace

EXPERIENCE

Software Developer — Ethical Intelligence | July 2026 – Present

Project: Hospital Management System (HMS) — live production system at a healthcare facility

- Develop and maintain REST APIs for hospital modules using Python, Django, and Django REST Framework, following team coding standards
- Build backend features for OPD/IPD, patient assessment, and prescription workflows, contributing to implementation and integration
- Design and update MySQL database models and serializers for accurate, structured data handling
- Test code changes, fix bugs, and collaborate with the development team using Git in an agile, real-world software environment

Project: Momify Application — mobile application (Testing role, current, ~1 month)

- Performing functional and regression testing on an application developed by the team, using Postman for API testing and Apache JMeter for load testing
- Documenting and retesting reported defects with clear reproduction steps to support release quality

PROJECTS

E-Commerce Backend System | Python, Django REST Framework, MySQL, Postman

- Designed and developed RESTful APIs for e-commerce modules (Product, Category, Cart, Order, User Management) with full CRUD operations
- Implemented a custom user model with role-based access control and JWT-based authentication for secure access
- Integrated product filtering with django-filter and validated endpoints using Postman

Image Upload Management System | Java, Spring Boot, MySQL

- Developed REST APIs for image upload/download/retrieval using Spring Web, MultipartFile, and ResponseEntity<byte[]>, with a layered Controller-Service-Repository architecture

EDUCATION

B.Tech in Computer Science & Engineering (Specialization: AI & ML) — Technocrats Institute of Technology, Bhopal

Graduation Year: 2026

Higher Secondary Certificate (Class XII) — Laxmi Mandi H.S.S., Bhopal | 2022

KEY STRENGTHS

- Strong problem-solving mindset with clean, maintainable code; quick learner comfortable with ambiguous tasks and competing priorities
- Effective communicator and collaborative team player, experienced with Git/GitHub in a live production environment
